

Digital instructions. Smarter process execution.

Transforming static work instructions into dynamic, AI-supported workflows with real-time visibility.

WHY CHANGE?

The organisation relied on static, printed ERP-generated instructions, creating inefficiencies, limited flexibility and inconsistent process control.

- Static PDF work instructions printed and manually distributed
- Limited customization for different roles and workflows
- Information overload reducing user efficiency
- Lack of granular process tracking and analytics
- Manual input and authentication processes
- Slow onboarding for new workers
- Minimal visibility into real-time performance

HOW CLOCKWORX WORKS?

Clockworx delivered a fully digitised, customisable process management platform that connected work instructions, execution, user interaction and performance information in one environment.

- Replaced printed instructions with dynamic, AI-supported digital workflows
- Introduced step-by-step sequencing with embedded time tracking
- Enabled multilingual, role-based user interfaces
- Integrated RFID authentication to reduce manual input
- Provided granular process tracking and analytics
- Centralized communication and document version control
- Delivered real-time dashboards for performance visibility

MEASURED IMPACT

50% less manual input	40% faster onboarding	35% fewer execution errors	30% completion efficiency	20% higher workforce utilisation	100% real-time transparency
------------------------------------	------------------------------------	--	--	--	--

BUSINESS VALUE

More consistent execution.
Reduced manual effort.
Faster onboarding.
Fewer errors.
Greater workforce utilization.
Scalable, future-ready operations.
